Remote — same working hours as Berlin/Zurich · engageable as contractor or via your EOR · open to relocation

PROFESSIONAL SUMMARY

Senior engineer, 7+ years building and running multi-tenant B2B SaaS end to end — Django/DRF and Next.js/TypeScript in front, Kubernetes/ArgoCD and per-tenant GitLab CI behind — with SSO and identity (Keycloak, Better Auth, OAuth 2.0/OIDC) as the specialism. Every role of my career has been cross-border delivery from Albania to Western European and US principals — Siemens Mobility, Moneyfarm, Binary Tree — and I own systems from schema to deploy pipeline.

PROJECTS (OPEN SOURCE)

tenantiq — multi-tenant document-intelligence SaaS (in active development). Django REST + Next.js, pgvector retrieval, Celery/Redis async ingestion; per-tenant isolation enforced twice — a scoped ORM manager plus Postgres row-level security, with an adversarial test that removes the app-layer filter and proves the database still blocks the cross-tenant read. github.com/rbalukja15/tenantiq

pipelinemd — GitLab CI failure doctor, published on PyPI. Deterministic log distiller and 59-rule catalog, zero dependencies; an optional Claude layer must cite the log lines behind its diagnosis. github.com/rbalukja15/pipelinemd

k8s-doctor — read-only Kubernetes cluster health agent; rule engine plus LLM explanation, with overlay-drift detection. Python, Kubernetes API. github.com/rbalukja15/k8s-doctor

sso-auditor — OIDC / OAuth 2.0 configuration auditor producing spec-cited findings on PKCE, redirect URIs and token lifetimes. github.com/rbalukja15/sso-auditor

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, C#, PHP, SQL
Frontend	React, Next.js, Redux, React Query, TailwindCSS, MUI, shadcn/ui, Styled Components, Gatsby, Storybook
Backend	Django, Django REST Framework, Flask, Node.js, .NET Core, Entity Framework, TypeORM
Data	Pandas (vectorised pipelines), PostgreSQL (incl. row-level security), MySQL, SQL Server, SQLite
AI & Retrieval	RAG pipelines, pgvector / vector search, embeddings, LLM API integration *(personal projects)*
DevOps	Docker, Kubernetes, Kustomize, ArgoCD (GitOps), GitLab CI/CD, Celery, Redis, AWS (EC2, RDS, Lambda, S3, CloudFront, CloudWatch), Azure DevOps, Renovate
Auth	Keycloak (multi-tenant SSO), Better Auth, Auth0, OAuth 2.0 / OIDC, stateless JWT sessions
Testing	PyTest, Jest, React Testing Library, Cypress (e2e), Playwright, Enzyme
Architecture	Multi-tenant SaaS, PWAs & service workers, structured logging (Pino), JSON Schema validation, REST API design

PROFESSIONAL EXPERIENCE

Ritech International AG — Senior Software Engineer, Full-Stack & Platform Jan 2023 – Present

Zug, Switzerland · Client: eos.uptrade (Siemens Mobility) — digital ticketing for Deutsche Bahn, BVG Berlin, SSB Stuttgart and NAH.SH; 8M+ tickets sold per month.

- Built and maintained a multi-tenant Next.js/TypeScript webshop serving multiple transit operators from a single codebase.
- Implemented multi-tenant SSO with Keycloak; migrated authentication from react-oidc-context to Better Auth with stateless JWT sessions and per-tenant OAuth/OIDC providers; diagnosed and fixed a session-persistence failure caused by oversized chunked cookies.
- Built a PWA ticket viewer — three-tier caching (in-memory, SessionStorage, IndexedDB), service worker, automatic template-version migration, postMessage integration with third-party host apps.
- Containerised services to Kubernetes with Kustomize; maintained GitLab CI/CD with per-tenant build configurations and credential masking; introduced Pino structured logging for cross-tenant observability.

Stack: Next.js, React, TypeScript, Keycloak, Better Auth, Kubernetes, Kustomize, GitLab CI/CD, Pino, PWA

Independent contractor — Full-Stack Engineer Mar 2022 – Jan 2023

Long-term client engagement · Multi-tenant order-optimisation and food-waste SaaS for a German food-retail company.

- Architected and built multi-tenant features end to end across a Django/Python backend and a React/TypeScript frontend.
- Redesigned data-intensive backend logic on pandas pipelines — distribution calculations, hierarchical article/tour aggregation and a configurable business-rule engine — replacing iterrows-heavy code with vectorised operations.
- Owned the delivery pipeline: GitLab CI/CD with tag-based releases and Renovate; containerised with Docker and deployed via ArgoCD (GitOps).
- Added JSON Schema validation for preview-request APIs, React Query caching hooks and Cypress e2e coverage for lazy-loaded UIs.

Stack: Django, Django REST, Flask, Pandas, PostgreSQL, React, TypeScript, GitLab CI/CD, Docker, ArgoCD, Cypress, PyTest

division5 — Software Developer → Team Lead Sep 2020 – Mar 2022

Tirana, Albania

- Promoted to Team Lead (Nov 2021); ran code review and technical direction, and mentored interns and junior developers.
- Placed with a German food-retail SaaS client for the final year of the engagement.
- CMS for a food and recipe brand: project architecture, REST APIs, and the AWS infrastructure (EC2, RDS, Lambda, S3, CloudFront, CloudWatch).
- Theatre ticketing app: full-stack build and API integration.

Stack: Node.js, TypeORM, TypeScript, AWS, React, Redux, MaterialUI, Django, Gatsby

Moneyfarm — Full-Stack Engineer (direct contract) Oct 2021 – Feb 2022

Fintech · 20-week engagement

- Built front-end and back-end features including a public-facing pension calculator, with full unit and e2e test coverage.
- Implemented third-party client access via Auth0; built UI pages with Gatsby.

Stack: Django, React, Redux, TailwindCSS, Next.js, Auth0, Gatsby, Jest/Enzyme, Cypress, Storybook

Kreatx — Software Developer Mar 2019 – Apr 2020

Tirana, Albania

- **Client: Binary Tree, Inc. (now Quest Software)**, Nov 2019 – Apr 2020 — Power365 / PowerAD Active Directory migration and management tooling: full database text search, plus front-end, back-end and API-level integrations.
- **Client: geolocation platform** (~3 months) — embeddable iframe rendering JPEG2000 imagery and mapping points to locations. Designed the architecture, built the front end, integrated web services at API level, with CI/CD and unit testing.
- **Internal** — employee check-in/check-out time system with a CMS-triggered monthly calculation process; HR & finance CMS.

Stack: React, Knockout, .NET Core, .NET Framework, TypeORM, Dapper, LINQ, Django, SQLite, MySQL, jQuery, PHP, Azure DevOps, TFS

Software agency — Laravel Developer Oct 2018 – Mar 2019

Tirana, Albania · Client: SARIDA S.r.l. (Sestri Levante, Italy) — municipal tax and revenue management for Italian local authorities.

- First role after university; full-stack PHP/Laravel development on the client's municipal revenue platform.

Stack: PHP, Laravel, MySQL, jQuery

EDUCATION

MSc, Banking Management — "Aleksandër Moisiu" University, Durrës 2025 – Present

BSc, Computer Engineering — Epoka University, Tirana 2015 – 2018
